

"To improve the health of our communities by identifying sustainable solutions to community health issues, developing partnerships for implementation of strategies, and demonstrating our success through measurement of outcomes."

West Nile Virus Surveillance and Testing Information 2009

Seasonal West Nile virus (WNV) surveillance efforts detected evidence of circulating WNV beginning the last week of June, 2009 in both Bonneville and Canyon Counties. A wet spring, coupled with warm temperatures creates ample ecological niches to support prolific mosquito reproduction. We remind you to encourage mosquito bite avoidance. **FIGHT THE BITE!**

There are no changes from last years testing options.

Laboratory Testing

- Samples from individuals suspected with non-neurologic disease (i.e. West Nile fever) should be evaluated by a commercial laboratory offering WNV testing.
- **The Idaho Bureau of Laboratories will only test severe human cases (those presenting with neurologic or other severe manifestations) for the presence of specific antibodies against the virus.** Positive samples may be confirmed by the plaque reduction neutralization assay in order to rule-out cross reactivity with the St. Louis encephalitis virus, a cross-reactive flavivirus.

The Idaho Bureau of Laboratories (IBL) Testing

Type of Test	Collection Timing	Comments
Serology	Acute serum: 5-14 days from symptom onset. (8 days post-onset is optimal)	IgM and IgG will be evaluated for both single and paired samples.
	CSF: 3-10 days from symptom onset. (8 days post-onset optimal)	Although IgM in a single sample is suggestive of an acute illness, WNV-specific IgM has been detected in some individuals for over 500 days. Therefore, the presence of IgM in a single sample may not signify an acute infection.
	Convalescent serum: >21 days from onset	A 4-fold or greater change in IgM levels between acute and convalescent samples is more suggestive of an acute infection.

Reporting

- Hospitals, laboratories, physicians and other licensed health care providers must report each case or suspected case of West Nile fever and West Nile virus neuroinvasive disease to the Local Health District or Idaho Department of Health and Welfare Office of Epidemiology and Food Protection within 3 working days of identification, in accordance with the Rules and Regulations Governing Idaho Reportable Diseases (IDAPA 16.02.10).
- Reports must include:
 - Disease or condition being reported
 - Patient's name, date of birth, sex, address, and phone number
 - Physician's name, and phone number

For information and statistics on West Nile virus in Idaho go to www.westnile.idaho.gov. For national information on WNV go to the Centers for Disease Control and Prevention at www.cdc.gov. Cases and suspect cases should be reported to the Office of Communicable Disease Control & Public Health Preparedness, Central District Health Department at 327-8625 or fax 327-7100.
